SAFETY FOOTWEAR

Our new catalogue "Safety Footwear" includes many great items for the 2010 season.

The "sneakers light" line, which comprises ultralight shoes with breathable aluminium toe caps and "racing" outsoles, has been supplemented with five new models; three of them are fitted with high uppers and are reminiscent of motor racing drivers' footwear in their design.

The brand-new, state-of-the-art "manager" style line includes three models synonymous with innovative, captivating design as well as the fresh, "sporty" model made of denim and suede.

The basic trekking line has been remade, with changed colours and comfort for the four models, made of waterproof suede and thus S3 certified, a fundamental requirement for use in building and similar categories.

As for the "Heavy Duty" line, models 7290AKK and 7291AKK are back, with thoroughly changed design and technical particulars, made of the best commercially available materials.

WORKWEAR

Our workwear line for the next season includes some major new items.

As for winter, the new garments range from the waterproof two-coloured "ripstop" bomber jacket to the black brushed Oxford model and the brand-new Canadian-style parka jacket, made of grey printed twill.

The new sweatshirt line can boast two different types of logos, directly embroidered on the garments.

In addition, we have introduced two new comprehensive work lines, made of 100% cotton, 260 g/m², in modern colours and simple though durable, functional finishes.

The collection includes the new, colourful t-shirts available with two different types of logos, simple, functional garments for use, for example, for promotional purposes.

TECHNICAL SOCKS

We at Beta Utensili have supplemented our safety footwear collection with a range of technical socks: eight models designed to provide remarkable comfort and unparalleled sensitivity.

Our technical socks are meant to guarantee long-term softness and elasticity, while being synonymous with carefully selected materials and accurate design

SAFETY STANDARDS

HOW TO CHOOSE SAFETY FOOTWEAR

Make sure that the footwear matches the required protection class, according to type and workplace.
Below you will find European reference standards, including any and all additional specifications.

EUROPEAN STANDARDS (EN)

EN ISO 20344: Test methods and general requirements.

EN ISO 20345: Safety footwear with toe caps resistant to shocks up to 200 Joules.

EN ISO 20346: Protective footwear with toe caps resistant to shocks up to 100 Joules.

EN ISO 20347: Occupational footwear, no toe caps required.

EN ISO 20345: The footwear that complies with this norm is marked with the letter "S" (Safety). The letter "S" is followed by letters and/or numbers indicating the protection class the footwear belongs to.

SB Minimum requirements:

200 Joule toe cap.

Upper made from split leather or the like.

Minimum upper height.

S1 SB characteristics supplemented with the following:

Antistatic footwear (A).

Energy absorption in the heel region (E).

Closed back. (Low shoes as well)

Antislip UNI EN ISO 20345:2004/A1:2007.

Method in accordance EN13287:2004

S2 S1 characteristics supplemented with the following:

Waterproof upper, no water penetration for at least 1h (WRU).

S3 S2 characteristics supplemented with the following:

Penetration proof insole or inset (P).

Gripped outsole.

S4 S1 characteristics supplemented with the following:

Hydrocarbon proof outsole (ORO).

S5 S4 characteristics supplemented with the following:

Penetration proof insole or inset (P).

Gripped outsole.

EN ISO 20346: These shoes are basically the same as safety footwear. However, since they have 100 Joule toe caps, they are marked with the letter "P" (Protective). Hence they are defined as protective footwear.

They are used in workplace environments requiring no more than 100 Joule protection.

EN ISO 20347: These shoes do not have any protective toe caps and are marked with the letter "O" (Occupational); hence they are considered occupational footwear.

Footwear expected to meet any additional requirements shall carry the following identification letters:

Identification Code	Additional Requirements and Safety Standards	EN 20345	SB	S1	S2	S3	S4	S5
		EN 20346	—	P1	P2	P3	P4	P5
		EN 20347	—	O1	O2	—	—	—
A	Antistatic footwear		—					
E	Energy absorption in the heel region		—					
WRU	Dynamic water resistant upper		—	—			—	—
P	Penetration proof inset		—	—	—		—	
CI	Cold insulation		—	—	—	—	—	—
HI	Heat insulation		—	—	—	—	—	—
HRO	Heat resistant outsole		—	—	—	—	—	—
I	Electrical insulation (Dielectrics)		—	—	—	—	—	—
CR	Cut resistant upper		—	—	—	—	—	—
FO/ORO	Hydrocarbon proof outsole, always compulsory in EN 20345 - 20347 to specify in EN 20346							
SRC	Antislip EN 13287:2007		—	—	—	—	—	—

Compulsory requirement

— OPTIONAL REQUIREMENT

The foregoing is printed on a label inside the footwear

Additional requirement (if any)

TO MAKE IT EASIER TO IDENTIFY BOTH THE INNOVATIVE MATERIALS USED AND THE TECHNICAL SPECIFICATIONS, REFER TO THE TWO TABLES BELOW:

	Penetration proof midsole or inset
	Steel or plastic toe cap
	Antistatic Footwear
	Energy absorption in the heel region
	Oil, hydrocarbon and solvent proof outsole
	Antislip Outsole
	Flexing resistance > 60.000
	Heat resistance of outer sole (300 °C/min.)

EN 20345-20347 Footwear complying with new safety standards 2004-2007
SAS SYSTEM Progressive compression absorbing system at bottom back
3D LINING Three-dimensional multi-ply lining, highly breathable, remarkably absorbing and desorbing, lastingly abrasion resistant
PENETRATION PROOF INSOLE <ul style="list-style-type: none"> • Steel: made of elastic steel, lightweight, flexible • Composite: penetration proof insole made of tenacious multi-ply composite fibre resulting from ceramic treatment. This insole can boast the following peculiarities: <ul style="list-style-type: none"> - 100% foot sole protection vs. 85% covering as provided by steel insoles - Reduced overall weight and enhanced footwear flexibility - Remarkable heat insulation, e.g. under extreme temperatures - Cannot be detected by metal detectors
TOE CAP <ul style="list-style-type: none"> • Steel: made of hardened steel, 200 Joules • Aluminium: made of perforated aluminium; through a special membrane it provides ventilation, keeping the footwear waterproof, 200 Joules • Composite: made of polymer material; it provides the same crushing and compressive strength as a metal toe cap, while weighing much less (approximately half as much); nonmagnetic, cannot be detected by metal detectors, heat insulating, hardly conductive, resistant to sudden changes in temperature, acids and hydrocarbons. 200 Joules
BODY <ul style="list-style-type: none"> • 10: standard dimensions • 10.5: slightly increased width and looser fit, ideal for use with thick socks • 11: significantly widened body compared to standard dimensions. Recommended for demanding users
ESD Footwear developed to allow electrostatic charges to be steadily dissipated from the body to the ground. These protection devices are absolutely required for use in contact with machines, machinery and electronic units. <u>CAUTION! ESD footwear is not dielectric and must not be used by electricians.</u> ESD footwear is used in the electronic industry, mainly for microcircuit applications.

Special high-grip, durable (300 °C with 1 minute contact) nitrile rubber outsoles directly mounted on the uppers mean the main hallmark of these four pairs of shoes. Hence these shoes are ideal for use during any jobs subject to high abrasion, e.g. in roadworking and shipbuilding, earth moving, welding and heavy-duty carpentry. In addition, they are recommended for use in geographical areas subject to humidity (where average daily humidity exceeds 75%) – that is, where shoes with polyurethane outsoles should not be used.

This special section comprises so-called “white” footwear, notably shoes suitable for hygienic/sanitary, agricultural/food, chemical/ pharmaceutical and hotel use. Its hallmarks include a special outsole made of single-density polyurethane, which results in enhanced comfort while walking and reduced stress at the lower limbs for those who have to stand for several hours while working. Remarkable longitudinal and transverse outsole grip – for example, on greasy, wet surfaces – is the result of peculiar design.

SPECIAL NOTES

- Metal free
- Antistatic, antimycotic

Sneakers have grown into a custom and style phenomenon. As a result, this trend has also had an impact on safety footwear. Hence Beta Utensili has developed this line, which comprises 14 models: shoes mounted with special, low-profile, high-performance rubber outsoles. This hallmark translates into aesthetically appealing and captivating shoes, thus bringing the safety world increasingly close to fashion, without affecting technical performance in relation to flexibility, width, comfort as well as resistance to abrasions, heat and hydrocarbons.

The sneakers line includes the light shoes, "sneakers light", with perforated aluminium safety toe caps which provide ventilation through a special membrane, while maintaining waterproofness. In addition, these shoes are fitted with the new low "racing" outsoles made of dual density polyurethane with treat pattern for enhanced grip. All the shoes are made with wide body 11.

The ESD line shares the same characteristics as the "sneakers light" line. Footwear developed to allow electrostatic charges to be steadily dissipated from the body to the ground.

These protection devices are absolutely required for use in contact with machines, machinery and electronic units.

CAUTION! ESD footwear is not dielectric and must not be used by electricians.
ESD footwear is used in the electronic industry, mainly for microcircuit applications.

The composition of state-of-the-art materials results in varied thickness for each model, thus allowing any requirements to be met and making the technical socks suitable for any climatic condition.

Outlast®: maintains proper thermal balance, thus resulting in foot wellness

Coolmax®: highly breathable material, it allows rapid sweat evaporation

Dryarn®: groundbreaking, heat insulating, lightweight, highly breathable microfibre

Tactel®: remarkably soft to the touch, for maximized comfort, it dries quickly

MerylSkinLife®: antibacterial fibre with honeycomb structure for enhanced ventilation

WARNINGS

PRELIMINARY CHECKS AND USE

Before using the shoes, visually check their general state - that is, the seams, the soles and the strap fastenings -; also make sure that the shoes match all the specifications on the label, and mainly if they are provided with steel toes and penetration-proof steel midsoles.

MISUSE

Prolonged and/or repeated use:

- in contact with organic agents, herbicides, pesticides and highly concentrated acids
- at very low or very high temperatures (below -10 °C and over +70 °C)
- fully dipped shoe into water, mud, mortar and alike is not recommended.

ANTISTATIC SHOES

The shoes that belong to this category are designed to allow low currents (electrostatic charges) to be discharged, to reduce the risk of combustion by vapours and/or flammable materials.

However, antistatic footwear **DOES NOT** protect against electric shocks, as it forms only a barrier between the foot and the support.

Therefore, additional measures are required if there is risk of electric shocks.

Where antistatic shoes are required, the electric resistance of the ground shall be such that their functions are **NOT** prevented from being performed, and no insulating piece must be put between the underfoot and the user's foot.

If any insole is put in, the electric behaviour of the new configuration shall be checked; this precaution shall also be taken if the shoes are subject to twisting and humidity, or if the sole is excessively worn out and/or contaminated.

In addition, it is recommended that the user should regularly perform electric resistance tests in the workplace.

NOTES

- This catalogue supersedes all previous issues.
- No part of this catalogue may be reproduced without the prior consent of Beta Utensili S.p.A.
- Beta Utensili S.p.A. reserves the right to modify models and assortments shown in this catalogue in order to upgrade them or for any commercial and/or technical reasons without any obligation to advise on models sold previously.
- Beta Utensili S.p.A. reserves the right to withdraw from sale, for any technical and/or commercial reasons, any model from this catalogue without notice.
- All figures referring to model weights, sizes and performance in the catalogue are approximate and might be modified.
- Actual dimensions of models might vary from the illustrations in this catalogue.

WARRANTY

All Beta tools are guaranteed against faulty material or workmanship and, if returned at the customer's risk, will be repaired or replaced provided the item has been used correctly for the purpose for which it has been designed.
